

Shaker Cabinet Door Styles and Variations

The cabinet door photos below show variations on traditional Shaker cabinet door styles side by side for comparison.

The top row shows the modern, narrow frame 4S cabinet door in 3 different styles, along with the traditional Shaker door style in 2-3/8" and 3-1/8" frame widths, with square outside and inside edge and a slightly beveled IE2 inside edge variation.

The second and third row show additional inside and outside edge variations with subtle changes to the frame detail that elevate the look from the traditional squared off Shaker cabinet door style, as well as divided and v-groove panel options.
